🎯 CAREER OBJECTIVE

Passionate BCA student specializing in Artificial Intelligence and Machine Learning, seeking an opportunity to apply my skills in Python, NumPy, Pandas, and ML algorithms to solve real-world problems while continuously learning and contributing to organizational growth.

🎓 EDUCATION

Bachelor of Computer Applications (BCA) – AI & ML
Sanskriti University

Current CGPA: 7.45
Year: 2024 – 2027

12th - RBSE Board (2023 – 2024)

Nootan Adarsh vidhya mandir school, Nadbai

10th - RBSE Board (2021 – 2022)

Adarsh Gyan ganga school, Nadbai

🛠️ TECHNICAL SKILLS

Programming Languages:

- Java
- Python

AI / ML:

- Ml algorithms
- Pandas
- NumPy
- Scikit learn

- SQL
- Seaborn
- Matplotlib
- Data Visulization
- Deep Learning

Web / Tools:

- HTML, CSS, JS (Basics)
- Git&GitHub
- Jupyter Notebook
- Anaconda
- Pytorch

📜 CERTIFICATIONS

- Python Programming from **IIT Delhi**
- Machine Learning from **IIT Delhi**
- Artificial Intelligence from **IIT Delhi**

💻 PROJECTS

1. **Automatic Resume Filter (ML)**
   Link - **https://resumeiqfilter.streamlit.app/**

- Developed an **AI-based resume filtering system** to automatically shortlist candidates based on job descriptions.
- Implemented **NLP techniques** to extract skills, experience, and keywords from resumes.
- Used **text preprocessing** (tokenization, stop-word removal, TF-IDF) for accurate resume analysis.
- Built a **ranking mechanism** to score resumes according to job relevance.
- Reduced **manual HR screening time** by automating resume evaluation.
- Tools & Tech: **Python, NLP, Machine Learning, Pandas, Scikit-learn**

2. **Cyber Security Thread Detaction – AI Based (ML)**
   Link - https://threaddetaction.streamlit.app/

- Designed a **machine learning– based threat detection system** to identify suspicious and malicious activities.
- Applied **classification algorithms** to detect cyber threats such as malware and abnormal network behavior.
- Performed **data preprocessing&feature engineering** on cybersecurity datasets.
- Trained and evaluated models using **accuracy, precision, recall, and F1-score**.
- Implemented **real-time threat classification logic** for enhanced system security.
- Tools & Tech: **Python, Machine Learning, Pandas, NumPy, Scikit-learn**

3. **Customer Churn Prediction System**
   Link - **https://churnpredic.netlify.app/**
   Git - **https://github.com/keshavsharma5634/Customer-Churn-prediction**

Built a complete machine learning system that predicts customer churn with 78%+ accuracy.

Key Features: -

- XGBoost model tuned with Optuna
- SHAP explainability for predictions
- FastAPI REST API for real-time scoring
- Interactive ChurnGuard dashboard
- MLOps monitoring with drift detection

Tech Stack:

Python | XGBoost | Optuna | SHAP | FastAPI | Scikit-learn | Pandas

4. **Credit Card Fraud Detection System** | Python, XGBoost, Optuna, scikit-learn, FastAPI

   Git -
   https://github.com/keshavsharma5634/Credit-Card-Fraud-Detection-System

- Built an end-to-end fraud detection pipeline on 50,000 synthetic transactions achieving PR-AUC of 0.967 and ROC-AUC of 0.995
- Handled class imbalance using scale_pos_weight and cost-sensitive threshold optimization reducing business loss
- Engineered velocity-based features such as velocity_ratio and avg_tx_amt_24h as top fraud signals

- Tuned XGBoost with Optuna Bayesian optimization across 20 trials for best hyperparameters
- Implemented MLOps monitoring with PSI drift detection, latency SLOs under 150ms, and PII governance audit

🧠 SOFT SKILLS

- Problem Solving
- Logical Thinking
- Continuous Learner
- Good Communication Skills
